

Amendments to the Claims:

Please cancel Claims 31 through 36 without prejudice to or disclaimer of the subject matter recited therein.

Please amend Claims 1, 10, and 25 through 30 to read, as follows.

64

1. (Currently Amended) A toner supply container detachably mountable to an image forming apparatus, said toner supply container comprising:

a container body for containing toner, said container body being provided with an opening for permitting discharge of the toner therefrom; and

a feeding member, provided in said container body, for feeding the toner toward the opening,

wherein said feeding member includes a rotatable plate-like member extending in a longitudinal direction of said container body, said plate-like member being extended inclined relative to a rotational axis thereof and being provided with a projection effective to guide the toner substantially downwardly toward said opening portion with rotation thereof and a through-hole effective to allow the toner on said plate-like member to fall with rotation thereof. ~~a main body for accommodating toner; an opening for permitting discharge of the toner from the main body;~~

~~a rotatable feeding member, provided in the main body, for feeding the toner by rotation thereof;~~

~~wherein the feeding member including a lift portion for lifting the toner in the main body, a guiding portion for guiding the toner lifted by the collecting portion downwardly~~

*C1
unit*

~~toward the opening, and a falling portion for letting the toner lifted by the lifting portion
fall without feeding it toward the opening with rotation of the feeding member.~~

2. **(Canceled)**

3. **(Canceled)**

4. **(Previously Presented)** A toner supply container according to Claim 1, wherein a plurality of such projections are provided at longitudinally different positions on one side of said plate-like member.

5. **(Canceled)**

6. **(Previously Presented)** A toner supply container according to Claim 1, wherein a plurality of such projections are provided at longitudinally different positions on both sides of said plate-like member.

7. **(Canceled)**

8. **(Canceled)**

cut

9. **(Previously Presented)** A toner supply container according to Claim 6, wherein said projections are provided on both sides of said plate-like member so as to effect toner discharging action twice for one full rotation of said plate-like member.

10. **(Currently Amended)** A toner supply container according to any one of Claims 4, 6, and 9, Claim 9, wherein one of the plurality of projections is substantially close to or contiguous with said [[the]] opening portion. ~~the projected portions continuing to at one side of the plate member.~~

11. **(Previously Presented)** A toner supply container according to any one of Claims 4, 6, and 9, wherein said feeding member rotates integrally with said container body.

12. **(Previously Presented)** A toner supply container according to Claim 11, wherein the said container is substantially cylindrical.

Claims 13 through 24. **(Canceled)**

25. **(Currently Amended)** A toner supply container according to Claim 11, [[12,]] wherein said plate-like member is disposed so as to be in contact with or an inside surface of said container body.

26. (Currently Amended) A toner supply container according to Claim 11,
[[12,]] wherein said plate-like member extends substantially along a length of said
container body.

27. (Currently Amended) A toner supply container according to Claim 11, [12,]
wherein said plate-like member diametrically divides an inside of said container body into
two substantially equal parts.

28. (Currently Amended) A toner supply container according to any one of
Claims 4, 6, and 9, Claim 1; wherein a plurality of such projections are provided so as to be
partly overlapped with respect to a [[the]] longitudinal direction of said plate-like member.

29. (Currently Amended) A toner supply container according to any one of
Claims 4, 6, and 9, Claims 4, 6, 9, and 28; wherein a plurality of said projections are
provided, and said [[the]] through-hole is provided disposed between each of adjacent ones
of said projections.

30. (Currently Amended) A toner supply container according to any one of
Claims 4, 6, and 9, either Claim 4 or 6; further comprising a hollow extension extending
from said opening portion, said extension having an opening at a free end thereof to permit
discharge of the toner. projection projecting from one longitudinal end surface of said
container body having an opening at a free end thereof, wherein one of said plurality of
projections is close to or contiguous with said hollow projection.

Claims 31 through 36. (Canceled)

C1
cont

--37. (New) A toner supply container according to Claim 10, wherein said feeding member rotates integrally with said container body.

38. (New) A toner supply container according to Claim 37, wherein said plate-like member is positioned at a fixed position in said container body.

39. (New) A toner supply container according to Claim 11, wherein said plate-like member is positioned at a fixed position in said container body.

40. (New) A toner supply container according to Claim 11, wherein there are provided a plurality of such projections, and said through-hole is provided between each adjacent ones of said projections.--
